EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Matthew Smith on 24 April 2009.

The application has been amended as follows:

Amend claim 1 as follows:

1. (Currently Amended) A tube for a microscope comprising an objective defining an objective optical path, the tube defining a tube optical path, a binocular head provided at the tube defining an ocular optical path, a deflection element being provided in the tube optical path, wherein the objective optical axis is positioned between a deflection mirror and the binocular head, without intersecting the deflection mirror,

wherein a one-piece, single tube-lens system is positioned in the tube optical path and a modification to the inclination of the ocular optical path in relation to the horizontal by a value α causes the position of the deflection mirror to be modified by an angle $\alpha/2$.

Allowable Subject Matter

2. Claims 1-9 and 11-17 are allowed.
3. The following is an examiner's statement of reasons for allowance:

Claims 1-9 and 11-17 are allowable over the prior art for at least the reason that the prior art fails to teach and/or suggest “wherein the objective optical axis is positioned between a deflection mirror and the binocular head, without intersecting the deflection mirror” and “wherein a one-piece, single tube-lens system is positioned in the tube optical path” as set forth in the claimed combination.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”

Baumann et al., US 5,657,158, discloses in fig. 2 a tube for a microscope comprising an objective (7) defining an objective optical path (22), the tube defining a tube optical path (fig. 2), a binocular head (12) provided at the tube defining an ocular optical path (fig. 2), a deflection element (1) being provided in the tube optical path, wherein a one-piece, single tube-lens system (3, it is noted that a one-piece, single tube-lens system is considered to be a system of lenses which are grouped together as one piece like L1 and L2) is positioned in the tube optical path (fig. 2) and a modification to the inclination of the ocular optical path in relation to the horizontal by a value α causes the position of the deflection mirror (2) to be modified by an angle $\alpha/2$ (column 3, lines 24-26) but does not have wherein the objective optical axis is positioned between a deflection mirror and the binocular head, without intersecting the deflection mirror as claimed.

Kawasaki, US 2001/0030801 A1 discloses in figs. 1-6 a tube for a microscope comprising an objective (OB) defining an objective optical path, the tube defining a tube optical path (figs. 1-6), a binocular head (OC) provided at the tube defining an ocular optical path (figs. 1-6), a deflection element (P1) being provided in the tube optical path, wherein the objective optical axis (figs. 1-6) is positioned between a deflection mirror (M3) and the binocular head (OC), without intersecting the deflection mirror (figs. 1-6) and a modification to the inclination of the ocular optical path in relation to the horizontal by a value α causes the position of the deflection mirror (M3) to be modified by an angle $\alpha/2$ (page 5, section [0072]) but does not have wherein a one-piece, single tube-lens system (the lenses are dispersed throughout the tube) is positioned in the tube optical path as claimed.

Fujiwara, US 4,798,451 discloses in fig. 6 a tube for a microscope comprising an objective (not shown) defining an objective optical path, the tube defining a tube optical path (fig. 6), a binocular head (28) provided at the tube defining an ocular optical path (fig. 6), a deflection element (23) being provided in the tube optical path, wherein a one-piece, single tube-lens system (21) is positioned in the tube optical path (fig. 6) and a modification to the inclination of the ocular optical path in relation to the horizontal by a value α causes the position of the deflection mirror (22) to be modified by an angle $\alpha/2$ (column 4, lines 9-12) but does not have wherein the objective optical axis is positioned between a deflection mirror and the binocular head, without intersecting the deflection mirror as claimed.
